

Utility Upgrade Works, Felixstowe

Client Trinity College

Scott White and Hookins were appointed by Trinity College to design and undertake project management work for Felixstowe Distribution Park.

The extensive work at this distribution park involved major road refurbishment and upgrading of services, including a new HV ring main.

The services provided by SWH included assessment of the condition of all existing car parks, roads and footpaths, specification of reinstatement works and quality control checking of works carried out on site.

We prepared a detailed report and costing together with recommendations on phasing and extent of remedial works.

Our design involved the realignment of a number of footpaths and roads and improvement to allow better circulation of vehicles around the site.
